

RISK MANAGEMENT
ARE YOU PREPARED?

RM STUDIO provides fully traceable risk assessments, management and certification software in a single package based on ISO standards.

RM STUDIO

- on your desktop!

Is your company in control of its information?

Risk affects every business decision we make. Threats can materialise when we least expect them, and we must be ready to deal with incidents as soon as they arise.

Focused risk management is vital in running a successful, modern business

The business community has traditionally applied standards to reduce risk. The ISO 27001 (formerly BS 7799) security standard provides businesses with a clear way to mitigate risks in information security. ISO 14001 helps companies to manage environmental risks while ISO 9001 deals with quality issues.

RM Studio is the first tool of its kind that has standards embedded in the software. RM Studio is based on the methodologies of the ISO/IEC 27001 and ISO/IEC 27002 security standards, and the software guides users through the complex process of risk assessment, risk management and risk treatment.

Do your security provisions meet current legal requirements?

Legal requirements for information security affect more and more organisations. Risk assessment is an increasingly frequent demand.

If your company fits any of the following profiles then RM Studio could be an invaluable tool that will reduce complexity in your organisation.

- You are required by law to guarantee the security of information with sufficient security measures.
- You handle personal data and rely on information systems in your business.
- You need to implement higher levels of information security.
- You are seeking ISO 27001 certification.

What can RM Studio do for your company?

RM Studio will help your organisation clarify its vision and bring structure to policy making. Through a range of targeted reports.

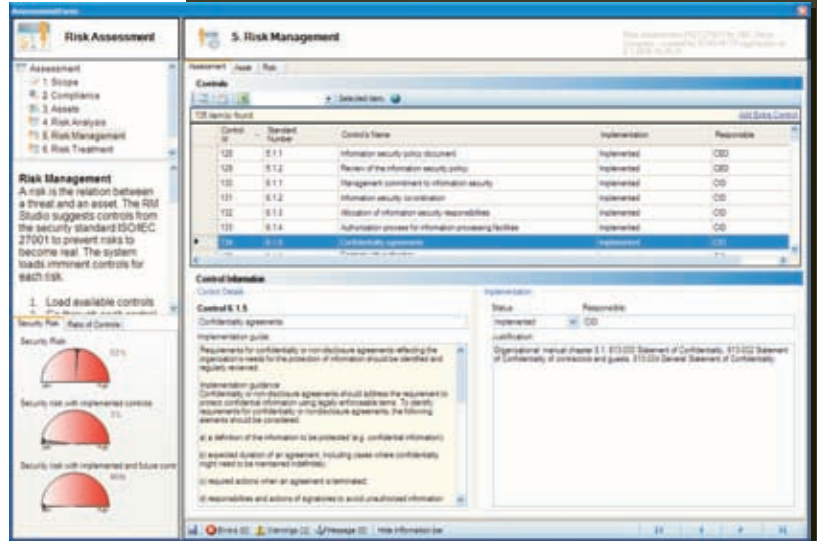

RM Studio will guide you through these complex processes and bring traceable manageability without the tedium.

RM Studio will ease risk management and help your organisation to:

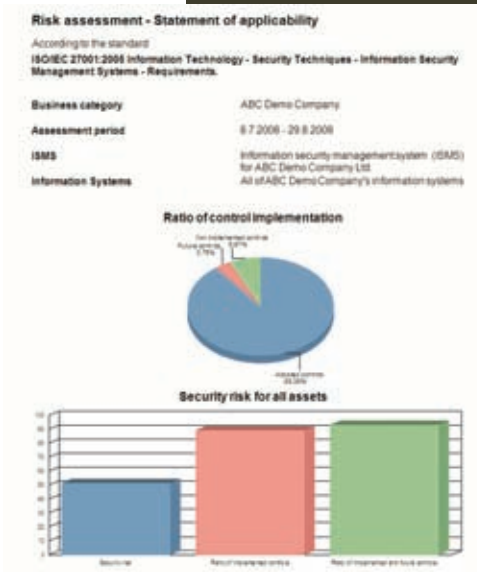

- identify information assets
- evaluate threats
- react to positive and negative developments
- secure your information according to ISO standards
- streamline risk assessment and reduce complexity and costs
- attain certification according to international standards

How will you benefit?

- Effectively monitor and assess risks
- Secure your Information as required by authorities
- Ensure traceability
- Reduce consultancy costs
- Produce comprehensive reports
- Save time

Manage your risk by identifying controls that hedge against it

Generate various reports such as Statement Of Applicability, List of future controls and more

Risk assessment, management and certification

Information security involves protecting information from diverse threats and ensuring confidentiality, integrity and availability. The scope of international security standards ISO/IEC 27002 (ISO/IEC 17799) and ISO/IEC 27001 is not limited to the information systems themselves, but also addresses related work and equipment. Business entities must register their procedures and organisational structure in an organisational manual that incorporates points of emphasis such as quality issues, information security and environmental security. The organisational manual

contains company policy, work procedures, processes and other information.

RM Studio provides a framework for procedures, processes and policies, thus improving consistency and accessibility at the same time as assessing and managing your information security. RM Studio can produce an assessment of a single department, a process or an entire company. You define your own security controls and the level of compliance with different standards.

Stiki Information Security and Consulting

Stiki specialises in data protection and information security consulting. We employ highly competent and well-educated professionals, and our operations are certified for security as well as quality under the ISO/IEC 27001 and ISO 9001 international standards.

Our software development complies with Microsoft Solution Framework procedures and is certified by the British Standards Institution in accordance with ISO 9001 and ISO/IEC 27001.
